

the trash that was written years ago about locally informative broadcasts should be thrown out. this is another ploy in attempt to control what is heard by a locality so another locality cannot find out whats going on in another. traffic and weather carriage should not be of any concern. same thing with other locality broadcasts on other satellite networks. same with channel blockouts from fcc for sports and etc. im not familiar with with the specifics, but this is more of a hassle to xmradio to provide a decent service to their customers needing to follow more restrictions than they already are.
